

SuperOffice Analyze

for Seven (7.5)

This document contains the detailed system requirements for SuperOffice Analyze for Seven

Web Server

| | |
|------------------------------|--|
| Processor: | Intel ® 3.0Ghz Dual / Quad Core (x86) or (x64) AMD™3.0Ghz Dual / Quad Core (x86) or (x64) |
| Memory (RAM): | 3 GB |
| Operating system: | Microsoft Windows Server 2003 (32bit) or (64bit) (R2) Microsoft Windows Server 2008 (32bit) or (64bit) Microsoft Windows Server 2008 R2 Microsoft Windows Server 2012 |
| Network: | TCP / IP network with less than 10 ms response time |
| Internet Information Server: | Microsoft IIS 6.0 Microsoft IIS 7.0 Microsoft IIS 7.5 Microsoft IIS 8.0 |
| SMTP / HTTP: | Port 143 and 25 must be open between the web and e-mail server. HTTP must be opened in the firewall (Default port 80) |
| Other: | Microsoft .NET v4.0 (full installation) Locale Administrator rights (installation) |

Note!

Actual requirements and product functionality may vary depending on system configuration and number of users.

Database Server

| | |
|--------------------|--|
| Suppliers: | Microsoft |
| Database server(s) | Microsoft SQL Server 2005 (32bit) or (64bit) Microsoft SQL Server 2008 (32bit) or (64bit) Microsoft SQL Server 2012 Microsoft SQL Server 2014 |
| Port: | Port 1433 to SQL-server must be accessible from the web server. Or any other port if not default port isn't used. |

Note!

The SuperOffice Analyze database can be installed on existing database servers (stand-alone or clustered). SuperOffice CRM application must use the same database type as defined above. It is recommended that the server has enough RAM so memory swapping to disk is minimal. If you want to connect to an Oracle or other data source, we recommend you to set up a satellite that replicates data into a SQL Server database for reporting.

For detailed system requirements, please read the requirements from the database vendors. Requirements for the database server will vary depending on database size and number of concurrent users.

For better performance it is often the database server, you should adjust. We have made separate suggestions for optimal performance on your database server. This is not a requirement but a suggestion to get more out of your solution. See more on:
